EDUCATION

University of Toronto Scarborough (3.7/4.0 GPA)

Honours Bachelor of Science in Computer Science and Statistics Minor (Co-op)

Toronto, ON

Sep. 2025 – Present

EXPERIENCE

Full-Stack Developer Intern

KorraNet Creative Inc. (Riipen)

May 2026 – Present

Winnipeg, Manitoba

- Hardened FastAPI backend reliability and security by auditing and restructuring environment variable ingestion and removing hardcoded secrets.
- Strengthened Meta OAuth token handling by identifying gaps in token storage, expiration, and user-specific mapping, and implementing fixes for better integration of AI models.
- Improved API error handling and timeout resilience to increase backend stability for MVP launch and improved system architecture to reduce system crashes and failed API calls.
- Implemented logging across onboarding and authentication flows to isolate bugs and support new developer teams.

Co-President, NASA HUNCH

NASA HUNCH Program

Sep. 2023 – June 2025

Canada

- Secured a 3rd-place international finish as the executive of the first Canadian team to compete in NASA Hunch.
- Engineered an autonomous Lunar Robot using Arduino, and CAD simulation to execute navigation on lunar terrain.
- Programmed a real-time C++ control algorithm utilizing non-blocking execution loops to prevent system unresponsiveness and synchronize timed image capture sequences.

PROJECTS

Context Sync Extension | TypeScript, VS Code Extension API

Apr. 2026 – Present

- Developed a VS Code extension with over 400 downloads that automates AI chat context sharing to maintain workspace continuity across developer environments.
- Designed a structured Markdown format utilizing weighted graph edges to optimize the token-usage-to-context ratio.
- Integrated GitHub Copilot, OneDrive, and Obsidian to automate team synchronization to streamline workflows.
- Architected a lightweight FastAPI backend to handle secure, fast data synchronization and state management.

Clinical AI Assistant (Top 10 Projects @ GenAI Genesis) | Python, SQL, OpenCV

Mar. 2026

- Developed an AI clinical assistant using IBM Watsonx APIs to automate patient check-ins and structure data.
- Engineered a live monitoring dashboard with a computer vision module for real-time fall detection.
- Built a PIPEDA and HIPAA-compliant backend using FastAPI and Supabase to process healthcare information.
- Developed a spatial visualization tool that generates 3D labelled hospital models by extruding floor plans.

Automated Table Tennis Referee (Finalist @ Hack Canada) | Python, C, YOLO

Mar. 2026

- Engineered a live computer vision system using OpenCV and YOLO coordinates to track and automate scoring game.
- Developed game-state logic and scoring algorithms by processing coordinates from a YOLO object detection.
- Integrated a Solana-based prediction market protocol to use fast blockchain transactions for secure, match wagering.

Sustainability NFT Tokenizer (3rd Place Overall @ UTRA Hacks) | Python, JavaScript

Feb. 2026

- Developed a sustainability app using the Openrouter and a confidence-scoring LLM algorithm to validate input.
- Integrated the Solana blockchain to automatically mint and distribute NFTs as rewards for verified sustainable actions.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, JavaScript, Typescript, Bash, HTML, CSS

Libraries/Frameworks: OpenCV, NumPy, Flask, FastAPI, Node.js, React

Developer Tools: Linux Terminal, Git, Github, VS Code, Linux, Docker, Jira/Confluence, Slack, PGAdmin

Cloud/Databases: Vercel, Vultr, Railway, Supabase, PostgreSQL, IBM Cloud

AI Tools: Claude Code, Cursor, Google Antigravity, Gemini CLI, Github Copilot, Nvidia NIM
