EDUCATION

University of Toronto

Honours B.Sc. in Computer Science (Co-op) | GPA: 3.7/4.0

Sept. 2025 – Dec. 2028

Toronto, ON

EXPERIENCE

KorraNet Creative Inc.

Full-Stack Developer Intern

May 2026 – Present

Winnipeg, Manitoba (Remote)

- Restructured secret ingestion and eliminated hardcoded credentials across **3 core services**, migrating to secure environment management and reducing credential exposure.
- Optimized Meta OAuth token handling and storage architecture, reducing token refresh failures by **40%+** and ensuring reliable context availability for downstream AI model integrations.
- Reduced system crashes and failed API calls by **85%+** through adding API error handling and timeout prevention to increase backend and system stability.
- Implemented logging across onboarding and authentication flows to isolate bugs and support new developer teams.

NASA Hunch Program

Co-President

Sept. 2023 – June 2025

Toronto, Ontario

- Secured a **3rd-place international** finish as the executive of the first Canadian team to compete in NASA Hunch.
- Built an autonomous Lunar Bot using Arduino and CAD, achieving **95%+ obstacle avoidance** in simulated terrain.
- Programmed a real-time C++ control algorithm using non-blocking execution loops to synchronize timed image capture and prevent system unresponsiveness.

PROJECTS

Embedded Key-Value Store | C++, POSIX Threads, Linux

June 2026

- Built an embedded C++ database with data sharding to prevent global lock bottlenecks and improve throughput.
- Implemented shared locks for non-blocking reads across **4 threads**, preventing race conditions during writes.
- Designed data persistence by writing updates to a log file before memory to ensure crash recovery and durability.
- Created a file compaction routine to safely clean up old or deleted keys and **reduce disk usage by 45%+** without pausing the app.

Context Sync Extension | TypeScript, VS Code Extension API

May 2026

- Developed a VS Code extension with **500+ downloads** that automates AI chat context sharing to maintain workspace continuity across developer environments.
- Designed a graph-based Markdown schema to maximize context density per token across AI assistant sessions.
- Integrated GitHub Copilot, OneDrive, and Google Drive to automate syncing and enable one-click environment setup.
- Created a lightweight Node.js backend to handle secure, fast data synchronization and state management.

Clinical AI Assistant (Top 10 Projects @ GenAI Genesis) | Python, SQL, OpenCV

Mar. 2026

- Deployed an AI-powered clinical assistant to automate patient check-ins and intake organized data into a SQL schema.
- Engineered a live monitoring dashboard with computer vision, achieving **98%+ accuracy** for real-time fall detection.
- Developed a spatial visualization algorithm that generates 3D labelled hospital models by extruding floor plans.

Table Tennis Referee (Finalist @ Hack Canada) | Python, C, YOLO

Apr. 2026

- Achieved **90%+** ball tracking accuracy by engineering and training a live computer vision system using OpenCV.
- Developed game-state logic and scoring algorithms by processing coordinates from YOLOv8 object detection.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, JavaScript, TypeScript, Bash, HTML/CSS

Libraries/Frameworks: OpenCV, NumPy, Flask, FastAPI, Node.js, React

Developer Tools: Linux, Git, Github, Docker, PGAdmin, VS Code, Jira/Confluence, Slack

Cloud/Databases: PostgreSQL, IBM Cloud, Google Cloud Project, Vercel, Vultr, Railway, Supabase
